TurnKey Internet, Inc. celebrates Earth Day 2018 with new green awards and awareness

LATHAM, NEW YORK (April 17, 2018) – To celebrate Earth Day, leading Data Center and Cloud Hosting Solutions provider TurnKey Internet, Inc. announced today that it has been awarded and certified by the Green Business Bureau™ and Green America™ for its green initiatives and commitment to the environment. TurnKey Internet's green data center utilizes state-of-the-art technology and 100% renewable energy to provide the greenest cloud-based IT services for clients all over the world. In anticipation of Earth Day, April 22nd, TurnKey Internet plans to amplify awareness for their low-energy, low-impact IT solutions.

TurnKey Internet will run an Earth Day promotion for the entirety of April to honor their commitment to the environment. Their New York data center offers revolutionary green IT solutions, such as employing low-voltage servers stored in ultra-efficient cold containment pods in each section of their data center. These pods deliver precision spot-cooling to temperature-regulated server racks, which use thirty-three percent less energy than traditional data centers.

TurnKey Internet runs their Energy Star certified facility with 100% renewable hydro and solar power. Their state-of-the-art data center is equipped with on-site, rooftop solar panels, and uses hydro-power from Niagara Falls to further supplement their renewable energy initiatives as beneficiaries of Gov. Cuomo's "Recharge New York" power program. In 2013, The New York State Department of Environmental Conservation awarded TurnKey Internet the Environmental Excellence Award in recognition of their innovative data center design and outstanding commitment to environmental sustainability, social responsibility and economic viability.

"The future of both the Cloud Industry and the IT world in general revolve around energy—generating it from renewable resources and consuming it efficiently," said Adam Wills, CEO of TurnKey Internet. He continued to say, "TurnKey's green data center was built with sustainability in mind, and our commitment only evolves as the world-wide demand for energy consumption continues to multiply."

While maintaining their high-level energy-efficient data center, TurnKey Internet looks forward to Earth Day to emphasize that all it takes to merge technology and the environment is a little bit of corporate responsibility.
